

GPS Project : User manual

1. Overview

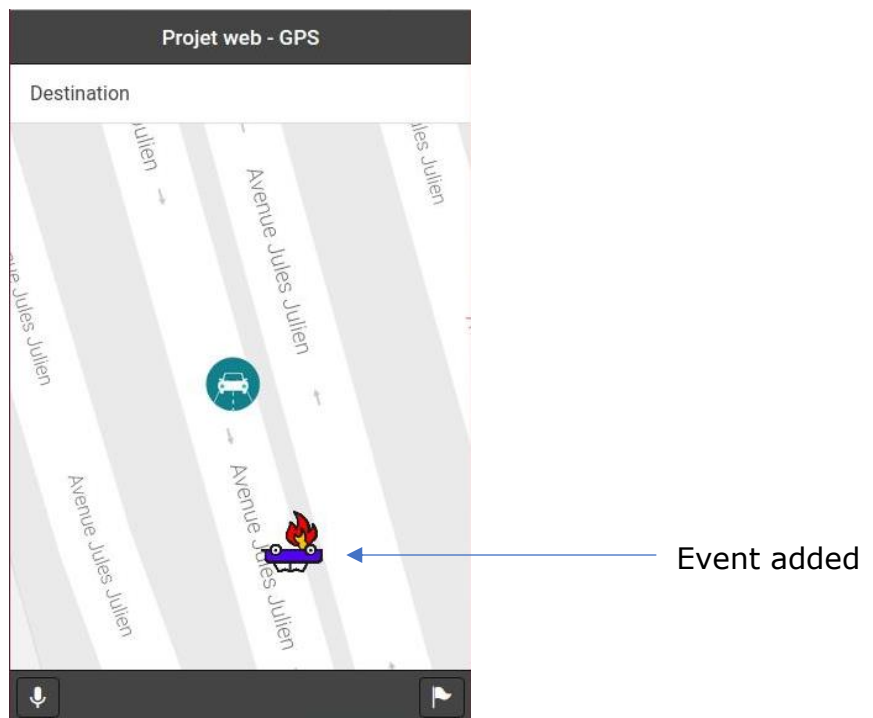

2. Save a POI

To save an event on the map, use the button with the flag. A drop-down menu containing the list of different items is displayed.

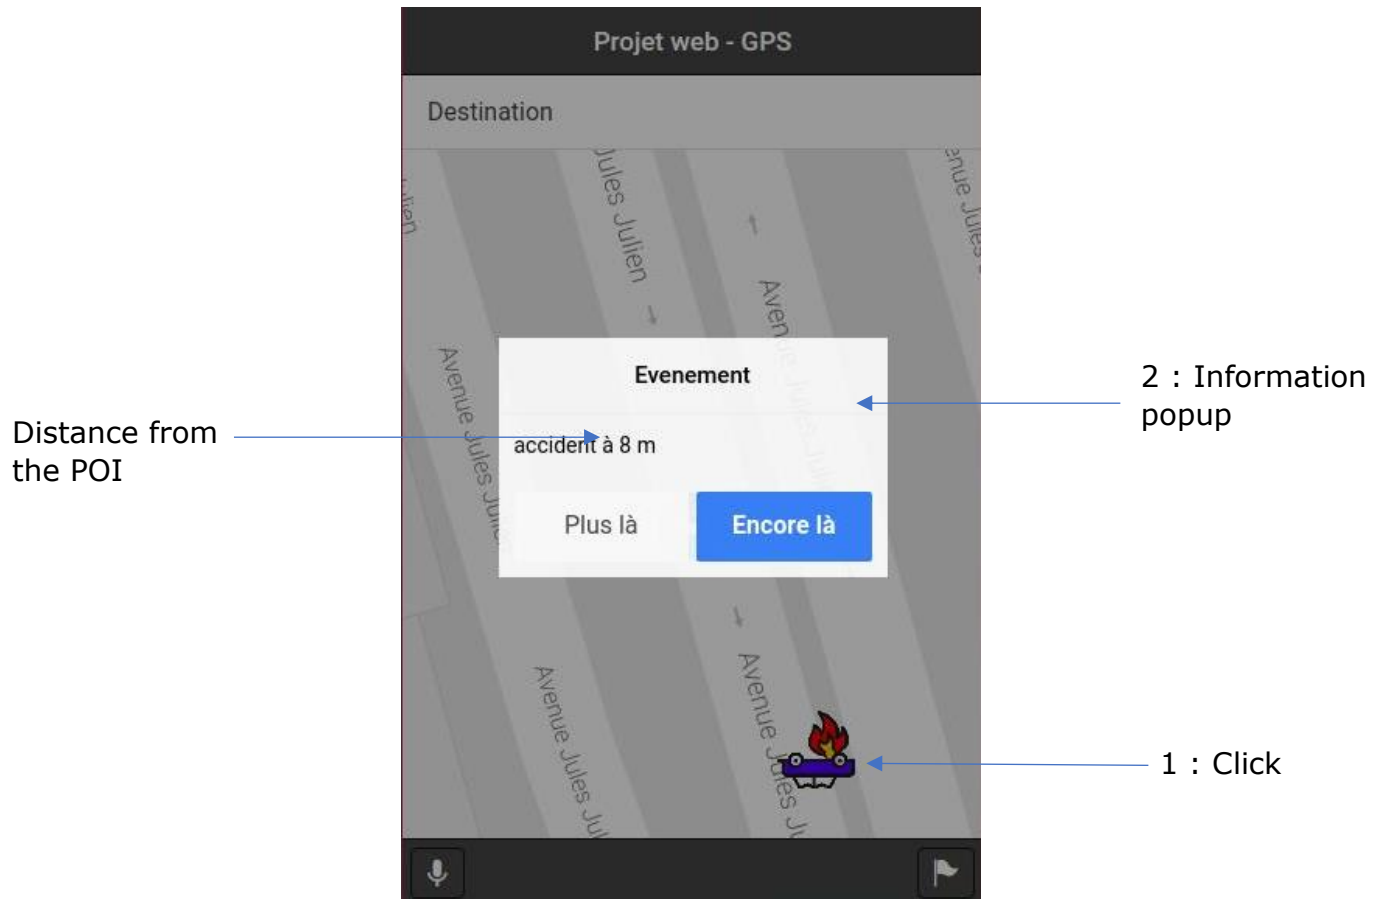

Now click on the event you want to declare. It is then added to the map.

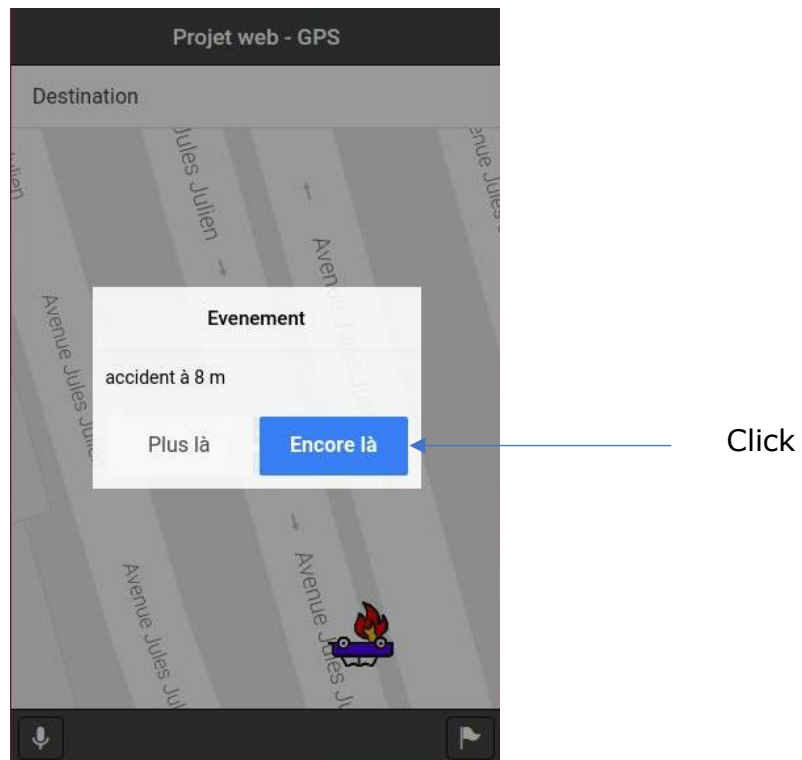

3. Click on POI

If you click on a POI, an information popup appears on the screen.

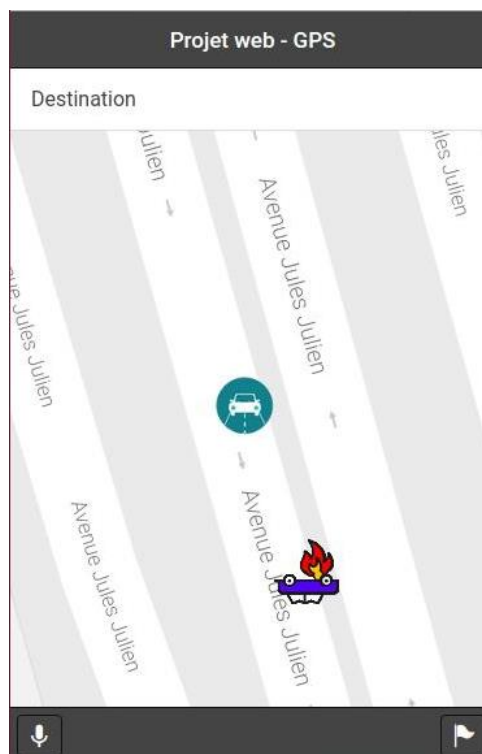

3.1 Validate POI

You can indicate that the event is still present by clicking on the button "Encore là".

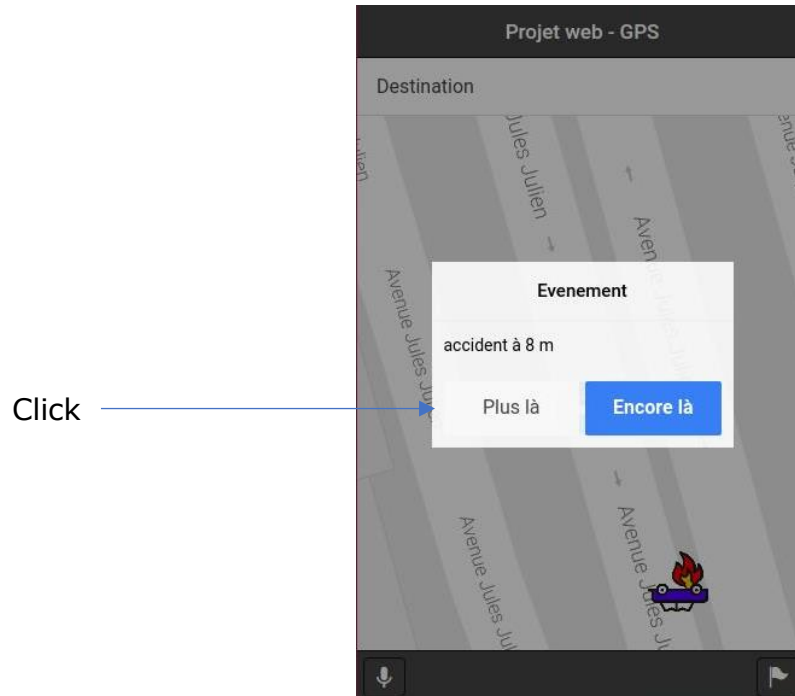

The POI is still here.

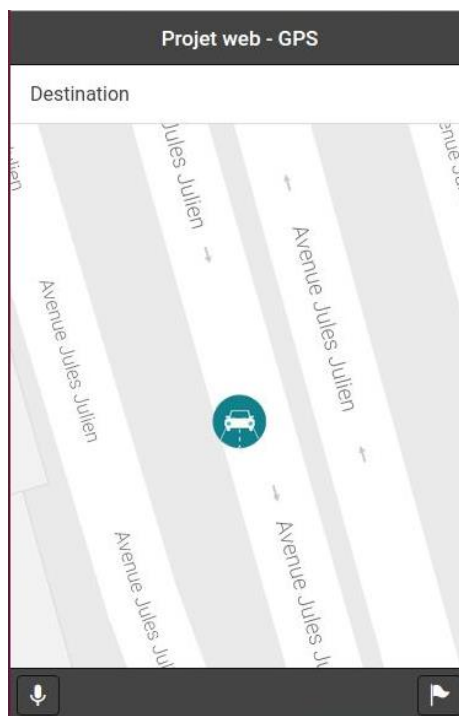

3.2 Unvalidate POI

You can indicate that the event is no longer present by clicking on the button "Plus là".

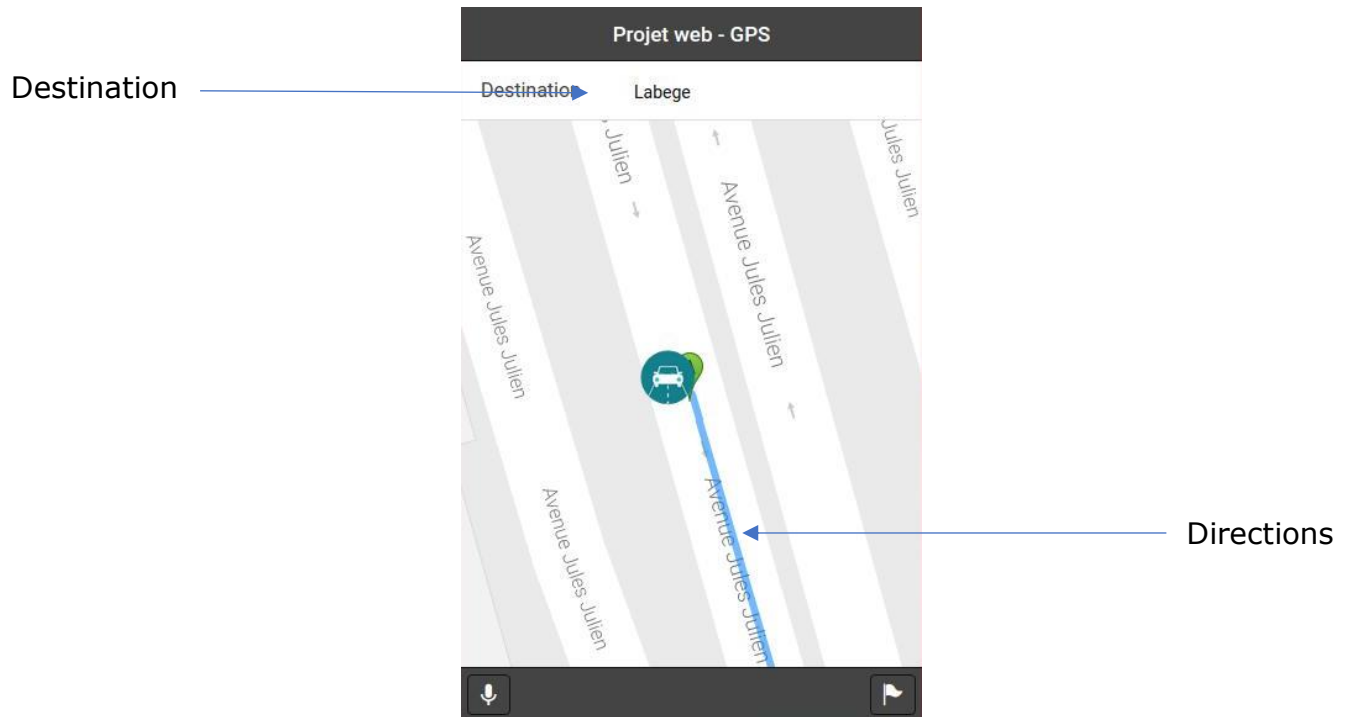

The POI is no longer present on the map.

4. Destination

In order to use the route function of the application, you can put the destination bar by entering an address.

5. Speech

You can use the previous functions that are directions and adding POI using your voice. To do this, click the speech button.

If you use one of the 5 words representing the events, a POI will be added to the map :

- Accident
- Bouchon
- Radar
- Police
- Danger

If you say a city or address, your destination will automatically be added to the destination bar.
